The above documents, which show the general technical standards in the relevant technical fields, describe an optical pickup having (1) a first laser beam source, (2) an integrated device having (a) a second laser beam source with a wavelength different from that of the first laser beam source and (b) a beam-receiving means both integrated therein, and (3) a laser beam path branching element to let both the beams that have been emitted by the first and second laser beam sources and then returned from an information recording medium together into the beam-receiving means of the integrated device; however, a constitution wherein a polarization beam splitter having polarization selectivity for beams of the first laser and polarization non-selectivity for those of the second laser is used as a laser beam path branching element, is neither described nor suggested in any of the documents cited in the ISR.
